

STEP ONE: SAND

Sand all of your wood surfaces and edges to get rid of any rough patches. **You can either paint everything first, let it dry, and then build OR build first and paint after. Just make sure you can still find the nail holes!**

STEP TWO: EYE

Place a drop of glue into the large hole on the head piece. Hammer the peg into the pre-drilled hole.

STEP THREE: TAIL

Attach the two tail fin pieces to the hexagon piece. Apply **GLUE FIRST** and then hammer each side of the fin onto the hexagon as shown. Flip over and repeat on the other side.

STEP FOUR: ASSEMBLE YOUR FISH

Starting with the tail, thread your pieces onto the gray cord. Leave the small bead at the end. This bead prevents all of the other pieces from sliding off the cord.

Use a bead between each wood piece to create space. Tie a knot at the top with the excess chord. Trim if necessary.

STEP FIVE:

Good job, you did it! Now it's time to decorate!
